EXPERIENCE

SRM University, AP

Jun 2025 – Aug 2025

Summer Research Intern

Remote

- Developed a machine learning-based Autism Spectrum Disorder (ASD) prediction system using questionnaire and demographic data, achieving **95% accuracy and high ROC-AUC** with Explainable AI (SHAP) for model interpretability.
- Implemented and deployed an end-to-end solution as a **Flask web application** for real-time predictions, including data preprocessing, class imbalance handling (SMOTE), and model optimization using Scikit-learn.

Tech Stack: Python, Scikit-learn, Pandas, NumPy, SHAP, SMOTE, Flask, HTML, CSS

PROJECTS

Electricity Theft Detection Using Machine Learning

- Detect abnormal electricity consumption patterns to identify potential power theft and reduce revenue losses.
- Developed an ML pipeline using statistical feature engineering and WGAN-GP for class imbalance; implemented XGBoost and LightGBM models achieving 95% accuracy and 0.97 ROC-AUC, and deployed using Flask.
- **Tech Stack:** Python, NumPy, Pandas, Scikit-learn, XGBoost, LightGBM, WGAN-GP, Flask, Render

Real Time UnderWater Video Enhancement with Adaptive Environment

- Underwater videos suffer from low visibility, color distortion, and varying environmental conditions, making reliable visual analysis difficult.
- Developed an adaptive real-time enhancement pipeline that detects underwater environments and applies dynamic techniques with temporal consistency and quality evaluation.
- **Tech Stack:** Python, OpenCV, NumPy, Image Processing techniques, Computer Vision

Last-Mile Delivery Optimization using MARL

- Traditional last-mile delivery systems struggle to efficiently handle dynamic traffic congestion, weather disruptions, and real-time order cancellations, leading to delayed deliveries and poor route optimization.
- Developed a real-time delivery optimization simulator using Multi-Agent Reinforcement Learning (MARL) with a DQN-based centralized agent for intelligent driver dispatching, dynamic rerouting, and adaptive decision-making under uncertain conditions.
- **Tech Stack:** Python, FastAPI, NumPy, Reinforcement Learning (DQN, Q-Learning), React, Vite, Leaflet, OSRM API, Pydantic

EDUCATION

SRM University, AP

Aug 2023 – Present

B.Tech in Computer Science & Engineering (AI & ML)

CGPA : 8.77 (Till Semester 5)

SKILLS

Programming Languages: Python, C, C++

CS Fundamentals: Data Structures & Algorithms, Object Oriented Programming, Operating Systems, Computer Networks

Artificial Intelligence: Machine Learning, Deep Learning

Libraries & Frameworks: NumPy, Pandas, Matplotlib, scikit-learn, TensorFlow, Flask

Data Visualization: Power BI

Version Control: Git, GitHub

Soft Skills: Problem Solving, Analytical Thinking, Communication, Team Collaboration, Time Management, Adaptability
